THINGSBOLT

Multi Keyless Ways
Generate one-time or short-time codes remotely, add cards and fingerprints locally.
Note: Custom codes must be within Bluetooth range or remotely generate via connected Gateway (Sold separately).

Keep Track of Access Log
Peace of mind by knowing who and when controls your keyless door lock, whether you are at work or home.

Ideal for Airbnb
Enhance your Airbnb property with our digital lock, which enables you to conveniently manage all your locks using user-friendly ThingsBolt App.

Stay Online (Gateway Required)
Get instant notifications on your phone, keeping you informed about the arrivals and departures. Feel at ease with complete access to the event history, allowing you to track all door activities.

SMART PHONE APP

With the ThingsBolt App, tapping your screen within Bluetooth range and gaining access in seconds

Smart Door Lock Software

Smart door lock software is a state of the art security system without using any traditional physical keys. It enables user to lock/unlock their doors from a mobile or web based app remotely. Access can be granted with secure digital credentials including passwords, fingerprints, RFID cards or smartphones. It is this contemporary philosophy that renders the access control more adaptable and dependable.

The software also supports management of users and permissions. The administrators can specify who can come in and when. You can generate temporary and one-time passcodes for guests, delivery services, or maintenance personnel, and these codes expire automatically. You can monitor the entry and exit log every time you want, as all access is recorded in detailed activity logs. It fosters transparency and it builds better security oversight.

The smart door lock firmware greatly increases the security as it eliminates the risk of lost, stolen or copied keys. What's more, you can control access to your property even when you are away for increased convenience. Ideal for homes, offices, hotels, commercial buildings, etc., and one platform can be used integrated with multi doors. You can also integrate with other smart security and automation systems.

So all in all, the smart door lock software is a solution that will work in today's modern security needs and beyond. It brings together simple, scalable, advanced technology. It delivers a dependable, effective solution to access management by enhancing security, convenience, and control.

smart door lock software

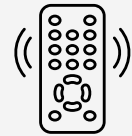

Secure your home or business with our intelligent security solutions. Take advantage of remote access, one-time passcodes, and real-time monitoring — all from the comfort of one app.
